ProQuest Health & Medical Collection란?

- ❖ 제공 내용 : 의학분야 관련된 전문(Full Text, Page Image) 데이터베이스로서 세계적으로 가장 우수한 의학 데이터베이스인 미국국립의학도서관(NLM)의 'MEDLINE' 데이터베이스의 내용 중 가장 지명도가 높은 3600종 이상의 핵심 저널의 색인, 초록은 물론 전문을 함께 제공.
- ❖ BMJ출판의 저널 다수의 아카이브(Vol.1./Issue.1 부터~ 현재) 포함하여 60여종의 저널 자료를 포함하며, 임상학과 관련한 Nature Reviews 7종 (Clinical Oncology, Cardiology, Nephrology Rheumatology 총 15종 제공) 비롯한 American Journal of Gastroenterology, Translational Psychiatry 등 50종의 Nature 출판 타이틀도 함께 수록.
- ❖ 제공 건수: 색인/초록 : 3,722 여종, 원문 3,115 여종
(☞ 2017년 12월 기준)

Anaesthesiology	Oncology
Cardiovascular Diseases	Orthopaedics
Communicable Diseases	Paediatrics
Dentistry	Psychiatry
Dermatology	Public Health
Endocrinology	Radiology
Gerontology	Respiratory Diseases
Immunology	Surgery
Neurology	Traumatology
Obstetrics And Gynaecology	And More

ProQuest Health & Medical Collection

❖ 주요 타이틀

– BMJ/The Lancet / Behavioral and Brain Sciences / Journal of Clinical Investigation / Digestive Diseases and Sciences / Gerontology / Diabetes / Diabetes Care / American Journal of Public Health / Genetics / Canadian Medical Association Journal/ Annals of the Royal College of Surgeons of England/ Bulletin of the Royal College of Surgeons of England/Faculty Dental Journal/ Journal of Food and Drug Analysis/Journal of Obesity/ Journal of Pregnancy/ Journal of Stem Cells/ Oxidative Medicine and Cellular Longevity

❖ 주요 기능

- **아티클 한국어 번역 기능** : Full Text 상세화면에서 이용 가능
- **MeSH Search** : Medical Subject Headings(MeSH) thesaurus를 이용한 자료 검색
- **PubMed LinkOut** : PubMed 이용 시 HMC 제공 전문/원문 자료로의 바로 가기

메인화면

The screenshot shows the ProQuest main page interface. A teal header bar contains the ProQuest logo on the left and navigation icons (refresh, home, user, help) on the right, with a red box labeled '1' around the icons. Below the header is a navigation menu with options: '기본 검색' (Basic Search), '고급 검색' (Advanced Search), '출판물' (Publications), and '데이터베이스 (2)' (Databases (2)), with a red box labeled '2' around the menu. The main content area features a large search input field with a magnifying glass icon, highlighted by a red box labeled '3'. Below the search field are two filter buttons: 'Full text' and 'Peer reviewed(동료 심사)' (with an information icon), highlighted by a red box labeled '4'. To the right of these filters are the labels '고급 검색' (Advanced Search) and '검색 팁' (Search Tips). Below the search area, there are links for '주제 분야 검색' (Subject Area Search) and '목록 보기' (View List), and a row of three small image thumbnails.

 - 와일드카드 문자기호 (?) – 하나 이상의 문자를 나타내는데 이용
 1. → 예: Sm?th → **Smith** or **Smyth**
4. **전문 (Full text)** : 원문을 제공하는 기사만 검색
동료 심사 (Peer reviewed) : 상호 심사 저널로 제한하여 기사 검색

고급검색

The screenshot shows the ProQuest Advanced Search interface. It includes a search bar (1), a dropdown menu for search criteria (2), and a section for additional search options (3). The search bar contains a search term and a dropdown menu. The dropdown menu is open, showing various search criteria such as '원하는 위치' (Desired location), 'Full text를 제외한 원하는 위치 - ALL*' (Desired location excluding full text - ALL*), '문서 제목 - T' (Document title - T), '본문 - FT*' (Full text - FT*), '저자 - AU' (Author - AU), '주제명(모두) - SU' (Subject name (all) - SU), '인물 - FER' (Person - FER), '지역 - LOC' (Location - LOC), '회사/조조 - ORG' (Company/organization - ORG), '초록 - AB' (Abstract - AB), '출판물 제목 - PUB' (Publication title - PUB), '추가 옵션' (Additional options), 'ISSN - ISSN', 'MeSH 주제 - MESH' (MeSH subject - MESH), '레지스트리 번호 - RN*' (Registry number - RN*), '물질 - SUBST*' (Substance - SUBST*), '소속기관 - AF*' (Affiliation - AF*), '식별자(키워드) - IF*' (Identifier (keyword) - IF*), '인용 문서 제목 - CTI*' (Cited document title - CTI*), and '인용 저자 - CAU*' (Cited author - CAU*). The search criteria section (3) includes fields for '주제명(모두): °' (Subject name (all): °) and 'MeSH 주제:' (MeSH subject:), each with a search button. The search criteria section also includes a dropdown menu for '출판 날짜:' (Publication date:), a radio button for 'Full text', and a radio button for 'Peer reviewed(동료 심사)' (Peer reviewed (peer review)).

1. 검색하고자 하는 필드(논문 제목, 저자명, 지도교수, 학교, 학위, 주제 분야, 태그 등)를 지정한 후, 해당되는 단어 또는 문구를 입력하여 정확하게 검색

ABSTRACT (SUMMARY)

Body dissatisfaction has been related to low self-esteem and depression in adolescents. With regard to the current world wide rise in childhood obesity and common stigmatization of adults and children with obesity, easy to use and cost effective measurements of body dissatisfaction would be helpful in epidemiological research. In the current study, detailed data on body measurements with regard to perceived and ideal body size and body dissatisfaction, as measured with the figure preference task, are presented for a population based sample of 3837 children. Perceived body size correlations to weight, body mass index [BMI], and waist circumference were between 0.41 and 0.54; and to height between 0.12 and 0.21. Odds ratios for lower self-esteem increased with increase in body dissatisfaction. Gender differences in body dissatisfaction were present but not found in relation to self-esteem. It is concluded that the figure preference task yields valuable information in epidemiological studies of children as young as 7.5 years of age. It is argued, that the figure preference task is an additional measurement which theoretically relates to psychological stress in childhood.

Indeed, what is most striking about the psychology or feminism (e.g., Cherry, (hermeneutics, Derrida, Foucault), critical interactionism (Mead, Blumer), community socio-cultural-historical approach, and psychology, the authors state that the "models" which find their basis in behavioural enormous theoretical and methodological unwittingly, what so many have called relevance created by low-level empiricism (1988). In the late 1960s, critics like Kenneth Ring (1967) declared social psychology to be "in a state of profound intellectual disarray" (p. 117) going on for at least a generation in the work of people like Kenneth Gergen, Rom Harré, Muzafir Sherif, Henri Tajfel, Serge Moscovici, and scores of others. These solutions focus on, among other things, the social act (not the individual) as the unit of study, the pervasive phenomenon of intersubjectivity, the relevance of discourse and narrative, and the ubiquitous influences of culture, history, and ideology upon our conception, creation, and practice of scientific activities. It is ironic that there are many Canadian academics who are today centrally engaged in the peripheral areas of social psychology that this text so steadfastly ignores. But this omission says more about the book's adherence to the mainstream than about its neglect of Canadian psychology; there can be no doubt that much of Canadian psychology is a direct importation from the American mainstream.

J.E. ALCOCK, D.W. GARMENT, and S. SADAVA. *Canadian Psychology* 42.3 (Aug 2001): 238-240. Reviewed by CHARLES LEMERY

"Three computer keyboards; six hands. Not bad, eh, for two guys from Saskatchewan and the Ottawa valley renegade, who have now done this five times." Thus ends the preface to Alcock, Garment, and Sadava's new edition of "the only English-Canadian social psychology textbook in existence." The quote shows nicely the self-effacing and deferential character of Canadian humour and its rather intimate connection to our vast

recognize the multiple factors that enter into a social anxiety disorder and also include sections that discuss the co-morbid conditions that often accompany this disorder, such as panic attacks, depression, substance abuse. This feature alone will be helpful to the many individuals with social phobia who use alcohol or drugs to self-medicate or who experience the paralysis of depression. I found the inclusive strategies targeting panic to be a welcome addition in that people who experience social panic generally respond better to interventions that integrate treatment techniques for panic disorder with techniques directed at social phobia per se. The workbooks of the volume, which use structured exercises and worksheets to facilitate implementation of various strategies, are easy to comprehend and the motivated reader, straightforward to use.

Although this book is directed primarily at people for whom social anxiety is a significant life concern, it will also be of interest to clinicians working with individuals with social phobia, avoidant personality disorder, and other conditions marked by interpersonal discomfort. Therapists who use this workbook will be pleased that the information presented is closely tied to contemporary research. In particular, the strategies for change are derived from empirically validated treatment techniques, thoughtfully adapted by the authors to the self-help format. Overall, this volume fills a void in the literature and will be appreciated by socially anxious individuals and their therapists.

초록 번역

Indeed, what is most striking about the book is what is missing in it. There is no serious discussion of feminist psychology or feminism (e.g., Cherry, 1993). Nor is there any mention of postmodernist influences (hermeneutics, Derrida, Foucault), critical psychology (Fox & Prilleltensky, 1997; Tolman, 1994), symbolic interactionism (Mead, Blumer), community psychology, the analysis of discourse, intersubjectivity, Vygotsky's socio-cultural-historical approach, and so on. For example, in their two-page over-view of theory in social psychology, the authors state that there is "no single, grand theory" but rather a number of loosely theoretical "models" which find their basis in behaviourism and more recently in cognitivism. This effectively ignores the enormous theoretical and methodological innovations that I have just listed. In so doing, the authors affirm, unwittingly, what so many have called the "crisis" in general and social psychology; and that is, the crisis of relevance created by low-level empiricist methodologies and inherent theoretical indeterminacy (Jackson, 1988). In the late 1960s, critics like Kenneth Ring (1967) declared social psychology to be "in a state of profound intellectual disarray" (p. 117). The critique of behavioural-cognitive-based social psychology has been going on for at least a generation in the work of people like Kenneth Gergen, Rom Harré, Muzafir Sherif, Henri Tajfel, Serge Moscovici, and scores of others. It is significant that the solutions to the crisis are not being produced within the mainstream but outside it. These solutions focus on, among other things, the social act (not the individual) as the unit of study, the pervasive phenomenon of intersubjectivity, the relevance of discourse and narrative, and the ubiquitous influences of culture, history, and ideology upon our conception, creation, and practice of scientific activities. It is ironic that there are many Canadian academics who are today centrally engaged in the peripheral areas of social psychology that this text so steadfastly ignores. But this omission says more about the book's adherence to the mainstream than about its neglect of Canadian psychology; there can be no doubt that much of Canadian psychology is a direct importation from the American mainstream.
