## Connecting the World of Biomedical Science

### Independent, Swiss-based and family-run

Karger Publishers in Basel, Switzerland, is a globally active medical and scientific publishing company. Independent and family-run in the fourth generation by Gabriella Karger, the company is dedicated to serving the information needs of the scientific community with publications of high-quality content, covering all fields of medical science. The publication program comprises 50 new books per year and 105 peer-reviewed journals with a growing number of open access publications. Karger content is published predominantly in English, with a strong focus on basic and clinical research, and is in general available online.

Abstract FullText PDF References

Current health care requires effective collaboration among providers. Poor communication may lead to poor patient outcomes. Although emphasis has been placed on interprofessional communication (particularly between physicians and nurses) in the health system [ 1 ], little has been written about problems in communication within the medical profession. During medical school and residency training students and residents are often confronted with problems related not only to supervisors but also to people at the same training level, as well as ancillary staff. Problems may also arise in dealing with colleagues in collaborative care and consultations, and this may contribute to physician burnout. Furthermore, we believe that each physician, throughout his/her career, spends a substantial amount of time dealing with difficult colleagues.

First, we will discuss the notion of difficult colleagues on the basis of the available limited literature, which uses multiple overlapping terms. We will then attempt to sketch some of the communication difficulties that may occur among physicians, based on our own extensive experience in providing and receiving consultations.

### Who Are the Difficult Colleagues?

There is not a single, unifying term or definition delineating difficult, impaired, disruptive, or
