Journals

With over 100 journals our titles comprise nearly the entire medical spectrum.

Traverse the Entire Medical Spectrum. One Journal at a Time.

With over 100 journals in health sciences to explore, there is a high chance you will find a journal that is an exact fit for you. Delivering high-quality content for more than 130 years is not our merit alone, but in big part due to our expert teams of editors and reviewers who dedicate so much to our journals. Thanks to their hard work, we have maintained high standards and developed our journals continuously over time, adapting accordingly and keeping up with the latest research findings. In line with our commitment to expand our publication sustainably and responsibly, you can now peruse our growing number in peer-reviewed Open Access and transformative journals.

More details about our respective aims and scope at-a-glance can be found on the individual journal homepages.

Statement Funding Sources Author Contributions References

Cardiology [1] and a Scientific Statement from the American Heart Association [2]. There is also growing evidence from studies [3–6] and reviews [7,8] that following an acute coronary syndrome (ACS) women have significantly higher rates of depression and anxiety, which is associated with adverse outcomes such as increased morbidity, rehospitalization, mortality and decreased quality of life. For example, in the EUROASPIRE IV survey of 7,589 patients from 24 countries with coronary heart disease, symptoms of depression were seen in 31% of women and 20% of men, and symptoms of anxiety in 39% of women and 22% of men [4]. Depression, especially, and anxiety are associated with other risk factors, including lower levels of educational attainment, sedentary or inactive lifestyle, smoking, unhealthy diet and reduced adherence with lifestle changes or risk factor modification [4, 5].

Why are females at increased risk for depression and anxiety and which female patients have the highest rates? It is imperative that studies aim to understand why depression and anxiety disproportionately impact women following an ACS and how this knowledge can be used to better inform care.

In this issue of Cardiology, Liblik et al. [9] present the trial design for the Female Risk factors for post-Infarction Depression and Anxiety (FRIDA) Study which aims to identify which psychosocial and cardiovascular risk factors place female patients (as defined by sex) at highest risk of developing depressive and anxious symptoms following an ACS and to correlate these factors to mortality, morbidity, and quality of life outcomes at three and 6 months.

This questionnaire-based study [9], informed by a pilot study [10] and a narrative review [8] aims to recruit 20,000 female participants admitted to hospital with ACS will be conducted across seven sites in Canada, chosen to reflect a diversity of female patients, including racial, socioeconomic, cultural, and linguistic characteristics. Data pertaining to sociodemographic status, social support and depression and anxiety will be collected within 72 h of admission and at three and 6-month follow-up. Depression and anxiety will be measured using the Hospital Anxiety and Depression

Book & Series

Books

With our book series and book titles, our program covers all disciplines of human medicine and related sciences.

Any Discipline of Human Medicine and Related Sciences. All in One Place.

With roots that run deep in publishing, our portfolio in books has a strong trunk with many branches. More than 9,000 titles are available to you at this very moment. From scientific book series and monographs to Fast Facts-our medical handbooks for healthcare professionals and patients-our book program covers all disciplines of human medicine and related sciences.

Over the past years, our selection has shifted from specialized, state-of-the-art research topics to titles with an emphasis on clinical and practical relevance. Certain specialities are now available in several subcategories. For example, we are the only publishing company offering a complete, in-depth and up-to-date coverage of research on the retina, a subspeciality of both ophthalmology and pediatric endocrinology.

What Does the Future of Books Look Like?

Responding to the need of authors, editors and readers to make content available more quickly, book chapters will become available and citable by DOI as soon as they're ready for publication without waiting for the whole volume to be completed. This is our first step in rethinking long-form content.

For ISCN - An International System for Human Cytogenomic Nomenclature, a standard reference volume for human cytogeneticists, molecular biologists, technicians, and students for the interpretation and communication of human cytogenetic nomenclature, we have extended the rigid book covers with an always up-to-date and available online version.

Interested in more? Have a look at the blog post series and learn more about our outlook for books.
